

## CLAIM AMENDMENTS

1. (Currently Amended) A system comprising:  
a source containing multimedia data;  
a browser adapted to establish a browser instance having a user interface to display a presentation of the multimedia data; and  
a markup language file associated with a script handler and loadable by the browser instance, the script handler executable to process multimedia data received from the source for presentation to the ~~browser~~ user interface.
2. (Original) The system of claim 1, wherein the markup language file includes a Hypertext Markup Language file.
3. (Original) The system of claim 1, wherein the source includes a compact disc drive.
4. (Original) The system of claim 1, wherein the source includes a digital video disc drive.
5. (Original) The system of claim 1, further comprising a control module adapted to provide an interface to the source.
6. (Original) The system of claim 5, wherein the control module includes an ActiveX component.
7. (Original) The system of claim 1, wherein the browser is capable of interfacing with an ActiveX component.
8. (Original) The system of claim 1, wherein the user interface includes one or more user interface control components, and wherein the script handler is triggered in response to activation of a user interface control component.

9. (Original) The system of claim 1, wherein the user interface includes one or more user interface display components to display information associated with the multimedia data.

10. (Currently Amended) A system comprising:  
a source containing audio/video data;  
a browser adapted to establish a browser instance having a user interface to display a presentation of the audio/video data; and  
a file associated with predetermined instructions, the file loadable by the browser instance and the instructions executable to display information associated with the audio/video data in the source.

11. (Original) The system of claim 10, wherein the displayed information includes a status of the source.

12. (Currently Amended) A method of displaying information associated with multimedia data, comprising:  
loading a markup language file associated with a script handler;  
invoking the script handler to create a user interface in a browser instance;  
displaying the information associated with the multimedia data with the user interface in the browser instance; and  
displaying a presentation of the multimedia data in the browser instance.

13. (Original) The method of claim 12, further comprising accessing the multimedia data stored in a storage source through a control module.

14. (Original) The method of claim 13, wherein the control module includes an ActiveX component.

15. (Original) The method of claim 12, wherein the user interface includes one or more control components, the method further comprising receiving activation of a user interface control component to control a source containing the multimedia data.

16. (Currently Amended) A method of displaying multimedia data, comprising:  
loading a file into a browser instance;  
creating an interface in the browser instance based on instructions associated with  
the file;  
receiving multimedia data from a source;  
displaying information associated with the multimedia data in the browser  
interface; and  
displaying a presentation of the multimedia data in the browser interface.
17. (Original) The method of claim 16, wherein the file includes a Hypertext Markup  
Language file.
18. (Original) The method of claim 16, further comprising accessing the multimedia  
using a control module.
19. (Original) The method of claim 18, wherein the control module includes an  
ActiveX component.

20. (Currently Amended) An article including one or more machine-readable storage media storing instructions for presenting audio/video data, the instructions when executed causing a system to:

generate an interface in a browser instance, wherein the interface is created by a scripted markup language file;

receive multimedia data from a source;

display information associated with the multimedia data in the interface ~~of the browser~~; and

present the multimedia data in the browser instance.

21. (Currently Amended) A system comprising:

a browser adapted to establish an instance having a user interface; and

a markup language file associated with a script handler and loadable by the browser instance, the script handler executable to process multimedia data received from a source for presentation to the ~~browser~~ user interface.

22. (Previously Presented) The system of claim 21, wherein the markup language file includes a Hypertext Markup Language file.

23. (Previously Presented) The system of claim 21, wherein the source includes a compact disc drive.

24. (Previously Presented) The system of claim 21, wherein the source includes a digital video disc drive.

25. (Previously Presented) The system of claim 21, further comprising a control module adapted to provide an interface to the source.

26. (Previously Presented) The system of claim 25, wherein the control module includes an ActiveX component.

27. (Previously Presented) The system of claim 21, wherein the browser is capable of interfacing with an ActiveX component.

28. (Previously Presented) The system of claim 21, wherein the user interface includes one or more user interface control components, and wherein the script handler is triggered in response to activation of a user interface control component.

29. (Previously Presented) The system of claim 21, wherein the user interface includes one or more user interface display components to display information associated with the multimedia data.

30. (Currently Amended) A system comprising:  
a browser adapted to establish a browser instance that has ~~having~~ a user interface to display a presentation of the audio/video data; and  
a file associated with predetermined instructions, the file loadable by the browser instance and the instructions executable to display information associated with audio/video data in a source.

31. (Previously Presented) The system of claim 30, wherein the displayed information includes a status of the source.
